PROFESSIONAL SUMMARY

Full Stack MERN Developer & ML/AI Developer specializing in Nodejs, React.js, and AI with proven experience at Codec Tech optimizing Machine learning performance. Focused on building scalable, reliable systems and efficient APIs.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML5, CSS3

Backend: Nodejs, Express, JWT, LLM, RESTful APIs, RAG, Agentic AI

Frontend: React.js, Redux, Bootstrap, Tailwind CSS

Database: MySQL, PostgreSQL, MongoDB,

Cloud & DevOps: AWS (EC2), Docker, Git, GitHub

PROFESSIONAL EXPERIENCE

Machine Learning Intern | Codec Technology Pvt. Ltd

Remote, May 2025 - July 2025

- Built a Breast Cancer Classification system using Logistic Regression, achieving ~95–98% accuracy on the Wisconsin Breast Cancer dataset for early tumor detection.
- Applied data preprocessing, normalization, and feature selection on 30 clinical features to enhance model performance and reduce overfitting.
- Developed and deployed an interactive Streamlit web application enabling real-time predictions with a clean UI for healthcare decision support.
- Utilized Python, Scikit-learn, NumPy, and Pickle for model training, evaluation, and deployment, ensuring efficient and scalable inference.

PROJECTS

WanderLust - Travel and Accommodation Platform [GitHub](#)

Node.js, Express.js, MongoDB, Mongoose, EJS, Passport.js, express-session, JavaScript, HTML, CSS, Vercel

- Built WanderHub, a full-stack travel listing web application enabling users to create, manage, and review listings, with secure authentication and session handling using Passport.js.
- Developed RESTful architecture with robust error handling and dynamic UI, and deployed on Vercel with MongoDB Atlas for scalable cloud-based data management.

Plant Disease Prediction - AI-based platform for detecting plant diseases from leaf images [GitHub](#)

Python, TensorFlow, Keras, CNN, NumPy, Matplotlib, PIL, Image Processing

- Built a Plant Disease Prediction system using Convolutional Neural Networks (CNN), trained on a dataset of 53,000+ plant images, achieving 84% accuracy in classifying healthy and diseased leaves.
- Designed an end-to-end deep learning pipeline with image preprocessing, augmentation (ImageDataGenerator), model training, and evaluation, improving model generalization and performance on unseen data.

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft AI Azure** | -Microsoft AI Azure (June 2025) |

Building LLM Application - (NVIDIA) | Building LLM Application

EDUCATION

B.Tech in Computer Science

2023 - 2027

R.V.S College of Engineering & Tech, Jamshedpur: Jharkhand

12th PCM

2021 - 2023

Jusco School South Park, (CBSE)
